Nodemason

CAPABILITY STATEMENT · 2026

We build networks, systems and software.

Nodemason designs, builds and runs redundant networks, clustered systems and fast, secure software for organisations that cannot afford downtime. One team answers for every layer, from the first cable to the last line of code.

20 yrs	800+	10,000+	> 99 %	73 → 92
building infrastructure	Cisco, Aruba, UniFi, FortiGate devices	workstations deployed	availability, external probe	security score, ISO 27001 audit

CORE CAPABILITIES

Networks

Cisco, Aruba, UniFi and FortiGate. Firewalls in pairs, dual WAN, redundant cores and switch stacks, site-to-site and remote VPN (IPsec, WireGuard, SSL + MFA), Wi-Fi 6 with seamless roaming, VLAN segmentation.

Systems

Hyper-V failover clusters on S2D, Active Directory, Linux and Windows estates, monitoring from outside, immutable and offsite backups with tested restores.

Security

Audits against ISO 27001 controls, PingCastle AD audits, Microsoft baselines and LAPS, EDR/XDR, IDS/IPS, DNS filtering, hardened servers, incident response.

Software

Fast websites, business applications, APIs and WordPress plugins. No trackers, strict CSP, accessible (WCAG 2.1 AA), multilingual EN · FR · LO.

PAST PERFORMANCE

International organisation, 3 sites
Estate built from a blank page and run for 11 years: ~70 switches, 40 access points, 700 k€+ saved over 10 years.

EU-funded training institute
Security audit and hardening: 12 / 12 items delivered, formal acceptance signed.

Incident response
Ransomware contained on the first machine: 0 lateral spread, 0 data lost.

HOW WE WORK

01 Survey

02 Design · fixed scope, fixed price

03 Build · tested by breaking it

04 Run · or hand over with documentation

WHY NODEMASON

- One team for network, systems and software: no seams to fall through
- Everything is failed over on purpose before handover
- Written plan, fixed price, documentation your next engineer can follow
